CLINICAL STAFFING ACUITY, ISOLATION CONTAINMENT & ED DIVERSION PROTOCOL

METROPOLITAN CLINICAL OPERATIONS AUTHORITY

Protocol ID:	HOSP-CLIN-2026-09 (Version 1.4)
Owner:	Chief Nursing Officer & Emergency Operations Director
Applies To:	nursing_float_roster.csv & hospital_units.csv
Effective Date:	November 1, 2026

1. SAFE NURSE-TO-PATIENT ACUITY RATIO SCHEDULE

Federal and Hospital Credentialing Standards mandate strict nurse-to-patient ratios across all inpatient wings. A unit with staffing_gap > 0 cannot absorb additional acute patients unless covered by a credential-matched nurse from nursing_float_roster.csv.

Clinical Department	Max Ratio	Required Credential	Float Mobilization Policy
Adult / Surgical / Neuro ICU	1 : 2	CCRN-ICU / CCRN-Cardiac	May deploy Available CCRN float RN; log OT if eligible
NICU / PICU Critical Care	1 : 2	NICU-III / PALS-ICU	Strictly specialty locked; MedSurg floats prohibited
Cardiac Step-Down (PCU)	1 : 3	CCRN-Cardiac / Telemetry	Verify OT cap (RN-306 overtime_eligible = False)
Infectious / Protective Isolation	1 : 3	Infection-Ctrl / Oncology	Must enforce HEPA 45-min turnaround + negative/positive seal
Medical / Orthopedic Wards	1 : 4-5	MedSurg-RN / Ortho-Surg	Eligible for standard Medical Ward decompression

2. FLOAT POOL DISPATCH & OVERTIME COMPLIANCE RULES

- Available Float Eligibility: Only nurses in nursing_float_roster.csv with availability_status = "Available" (RN-301, RN-303, RN-305, RN-306) may be assigned to cover open staffing gaps. Nurses marked "Assigned" or "On Leave" (RN-307) must NEVER be reassigned automatically.
- Overtime Threshold Conflict: Float nurses with overtime_eligible = False (e.g. RN-306 Claire Dubois) are strictly capped at 36 regular hours/week and cannot cover extended 12-hour surge overlaps without Nursing Operations signoff (nursing.ops@example.test).

3. EVS TERMINAL HEPA CLEARANCE & AMBULANCE DIVERSION CRITERIA

Occupied bed discharges in Infectious Disease Isolation (HWARD-02) create dirty turnaround beds (total_beds - occupied_beds - clean_beds). Environmental Services (EVS) must execute a 45-minute HEPA negative-pressure air purge and surface sporicidal disinfection before incrementing clean_beds. Should Adult ICU (HICU-01, HICU-02, HICU-03, HICU-04, HICU-05) combined clean_beds fall below 5 beds simultaneously while HED-01 is at 100% capacity, Command must initiate Temporary Ambulance Bypass pending Step-Down offload.
